

Deck fillers

Rutgerson's deck fillers for diesel, petrol, water and waste are available in the most common hose sizes, 38 mm and 50 mm as well as a third size, 54 mm, for diesel and petrol. The range also includes a deck access model for inspection or emergency steering. All models are color-coded and have the word diesel, petrol, water, waste or access clearly engraved to help distinguish one from another.

These products are all made of high-tech composite and stainless steel. No metal is in contact with the hull, which means that there is no need to worry about corrosion or grounding. Our composite deck fillers are also much lighter than similar products in casted steel.

Another benefit with Rutgerson's deck fillers is a unique and reliable link-system, made of the same strong nylon material as used on UV-resistant cable ties. All fillers have a traditional thread-lock, whilst the deck access plate has a bayonet-lock system.

Like all Rutgerson's products these deck fillers and access plates are designed and manufactured in our factory in Marstrand, Sweden.
